

● **Connect the cylinder, regulator, and manifold**

- ① Close the cylinder hand valve all the way, and connect the regulator (b) to the cylinder (a): thread the regulator nut onto the cylinder valve, and tighten enough to seal. Do not over-tighten.
- ② Attach a barbed swivel to the output of the regulator and tighten. Do not over-tighten.
- ③ Soften the ends of the 3' length of 5/16" gas tubing by immersing the ends in warm water for several minutes.
- ④ Slide two hose clamps onto the 3' length of 5/16" gas tubing. Push one end of the tubing onto the end of the barb swivel on the regulator. Push the other end onto the barbed end of the manifold (c)

T Tighten one hose clamp around the tubing and barb on each end- enough to seal but not enough to tear or cut the tubing.

● **Assemble and connect the gas lines**

- ⑤ Soften the ends of two 4' lengths of 5/16" gas tubing by immersing the ends in warm water for several minutes.
- ⑥ Slide two hose clamps onto each 4' length of 5/16" gas tubing. Push one tube onto each of the manifold (c) barbs. Push the opposite end of each tube onto a barbed swivel.
- T** Tighten hose clamps around each barb and around each barbed swivel - enough to seal but not enough to tear or cut the tubing.
- ⑦ Screw each barbed swivel with line onto one of the gray gas disconnects (d) (included in our kit).
- ⑧ Connect the gray disconnects to the keg (f) gas posts. The gas posts have a groove/notch at the bottom of the post for identification. Lift up on the disconnect ring, push onto post, and release ring.

● **Assemble and connect the liquid lines**

- ⑨ Soften the ends of two 5' lengths of 3/16" liquid tubing by immersing the ends in warm water for several minutes.
- ⑩ Slide four hose clamps onto each 5' length of 3/16" liquid tubing. Push one end of the tubing onto each of the black liquid disconnects (e). Push a picnic faucet into the other end of each tube.
- T** Tighten hose clamps around picnic faucet tube and barb connection and tube and barb connection to disconnect - enough to seal but not enough to tear or cut the tubing.
- ⑪ Connect the black disconnects to the keg (f) liquid posts. Lift up on the disconnect ring, push onto post, and release ring.

😊 Open the cylinder valve, adjust your regulator, open the manifold valve(s) to the keg(s), and you're ready to pour!
